

1    **ABSTRACT OF THE DISCLOSURE**

2            A fast release cymbal clamp includes a top pressing member with an extension  
3    extending into the assembly block and a handle pivotally connected to the assembly  
4    block such that the pivotal movement of the handle is able to force the auxiliary abutting  
5    fitting and the C-shaped clamp to engage with the outer periphery of the extension so  
6    that the cymbal extended by the extension is securely sandwiched between the upper  
7    abutting element and the lower abutting element after the handle is pivoted to engage the  
8    auxiliary abutting fitting.
